### Table of Contents

#### 1. Executive Summary

SocietyOS is a comprehensive, ad-free society facility management platform designed to digitise and streamline all operations within residential gated communities. The platform consists of three interconnected applications:

|              |                                      |                   |                                                  |
|--------------|--------------------------------------|-------------------|--------------------------------------------------|
|              |                                      |                   |                                                  |
| Resident App | Residents & Apartment Owners         | iOS & Android     | Day-to-day community living, services & payments |
| Staff App    | On-ground Service Staff & Security   | Android (Primary) | Task management, attendance & communications     |
| Admin Portal | Society Management Committee & Admin | Web + Mobile App  | Full operational oversight & reporting           |

SocietyOS goes beyond existing solutions like MyGate by adding utility service management, community canteen menus, event management, medical SOS & appointment booking,

complaints management, property sale requests, maintenance payments, and travel pause requests — all with zero advertisements.

## 2. Product Overview

### 2.1 Vision

To become the most comprehensive, resident-centric platform for managing life in a gated community — eliminating paper-based processes, reducing friction between residents and management, and empowering service staff with modern digital tools.

### 2.2 Problem Statement

- Residents face fragmented experiences across multiple apps and manual processes for different community needs.
- Service staff have no digital tool to manage tasks, attendance, or performance feedback.
- Society admins lack real-time visibility into operations, complaints, and financials.
- Existing apps like MyGate focus heavily on security but miss deeper community and service layers.
- Ads in existing apps create a poor user experience for a captive audience.

### 2.3 Target Users

#### Residents

- Apartment owners and tenants living in gated communities.
- Age group: 25-65 years; varying digital literacy.
- Need: convenience, transparency, and quick access to services.

#### Service Staff

- Maintenance workers, security guards, housekeeping, plumbers, electricians, carpenters.
- Age group: 20-50 years; basic smartphone users.
- Need: simple task management, proof-of-work tools, leave management.

#### Admin / Management Committee

- Elected members, property managers, facility managers.
- Need: dashboards, reports, control over services and residents.

### 2.4 Competitive Landscape

| Visitor Management       | Yes | Yes     | Yes     | Yes        |
|--------------------------|-----|---------|---------|------------|
| Maintenance Payments     | Yes | Partial | Yes     | Yes        |
| Utility Service Requests | No  | No      | Partial | Yes (Full) |
| Community Canteen Menu   | No  | No      | No      | Yes        |
| Event Management         | No  | Partial | No      | Yes (Full) |
| Medical SOS Button       | No  | No      | No      | Yes        |

|                            |         |     |         |              |
|----------------------------|---------|-----|---------|--------------|
| Doctor Appointment Booking | No      | No  | No      | Yes          |
| Staff App                  | No      | No  | Partial | Yes (Full)   |
| Complaints Management      | Partial | Yes | Yes     | Yes (Full)   |
| Property Sale Requests     | No      | No  | No      | Yes          |
| Travel/Maintenance Pause   | No      | No  | No      | Yes          |
| Ads                        | Yes     | Yes | Yes     | No (Ad-Free) |

### 3. App 1 — Resident Mobile App

#### 3.1 Core Modules (Parity with MyGate + Enhancements)

##### 3.1.1 Visitor & Gate Management

- Pre-approve visitors with QR code / OTP-based entry.
- Real-time notification on visitor arrival at gate.
- Track visitor log and history.
- Delivery management: expected deliveries, missed delivery alerts.
- Cab & vehicle pre-approval for gate pass.
- Domestic help / frequent visitor management with recurring approvals.

##### 3.1.2 Security & Alerts

- Real-time security guard communication.
- Emergency broadcasts from admin to all residents.
- Suspicious activity reporting.
- CCTV access for registered residents (if enabled by admin).

##### 3.1.3 Society Notices & Communication

- Bulletin board for official society announcements.
- Community polls and voting on society decisions.
- Neighbour-to-neighbour messaging within community.
- Discussion forums for residents.

#### 3.2 New Features (Beyond MyGate)

##### 3.2.1 Utility Service Request Management

Residents can raise requests for skilled services within the community.

- Browse available services: Plumber, Electrician, Carpenter, Painter, Pest Control, Appliance Repair, etc.
- View service provider profiles: name, photo, specialisation, average rating.

- Book a service with preferred date and time slot.
- Real-time status tracking: Requested > Assigned > In Progress > Completed.
- Receive push notifications at each stage transition.
- Rate and review the service upon completion (1-5 stars + text review).
- View history of all past service requests.
- Raise repeat requests from history with one tap.
- Admin-managed service catalog: admin controls which services are available.

### 3.2.2 Community Canteen

Digital menu and meal rating for the community canteen / mess.

- View today's menu: Breakfast, Lunch, Snacks, Dinner.
- Weekly menu view with day-by-day breakdown.
- Calorie and allergen information per dish (if entered by admin).
- Pre-order meals for specific time slots (if enabled by admin).
- Rate individual dishes: 1-5 stars + comments.
- View most popular dishes based on community ratings.
- Admin-managed menu: canteen staff update daily/weekly menus.

### 3.2.3 Event Management – Marzi organized.

Community event discovery and registration.

- Browse upcoming events organised
- View event details: name, date, time, venue, description, organiser.
- Register / RSVP for events with one tap.
- View number of people registered for each event.
- See list of neighbours attending the same event.
- Receive reminders 24 hours and 1 hour before the event.
- Post-event feedback and rating.
- Admin creates and manages events; resident-led events subject to admin approval.

### 3.2.4 Medical SOS

Instant emergency alert system for medical situations.

- Prominent SOS button on the home screen.
- On press: alerts go to the medical help desk, security gate, and designated first responders simultaneously.
- Includes resident name, flat number, and GPS location.
- Two-way acknowledgement: resident sees when help has been acknowledged.
- SOS log maintained for admin review.
- Configurable alert contacts by admin (can include external emergency services).
- Confirm SOS or cancel within 5 seconds to prevent false alarms.

### 3.2.5 Medical Help Desk Appointments

Book appointments with on-site medical staff or visiting doctors.

- View available doctors/nurses and their visiting schedules.
- Book appointment with preferred date and time slot.
- View upcoming and past appointments.
- Receive confirmation and reminders.
- Cancel or reschedule with advance notice.
- Telehealth / video consultation option (if enabled by admin).

### 3.2.6 Complaints Management

Structured system for raising, tracking, and resolving complaints.

- Raise a complaint with category (Water, Electricity, Lift, Parking, Noise, Cleanliness, etc.).
- Attach photos and descriptions.
- Track complaint status: Raised > Under Review > Assigned > Resolved > Closed.
- Receive notifications at each status change.
- Escalate unresolved complaints after a set period.
- Rate resolution quality upon closure.
- View past complaints and resolutions.
- Anonymous complaint submission option.

### 3.2.7 Staff Help Requests

Request assistance from society staff for common tasks.

- Request types: Help with heavy items, Document collection, Package pickup, etc.
- Assign request to available staff.
- Real-time status: Requested > Assigned > Completed.
- Rate the staff assistance after completion.

### 3.2.8 Maintenance Payments

Digital payment of monthly/quarterly society maintenance dues.

- View maintenance dues: current, past-due, and advance.
- View itemised breakdown of charges (maintenance, water, parking, etc.).
- Pay via UPI, Net Banking, Debit/Credit Card, Wallet.
- Download official receipts / invoices.
- Set up auto-pay for recurring payments.
- View complete payment history.
- Late payment interest calculation displayed transparently.
- Receive reminders before due date.

### 3.2.9 Property Sale Request

Residents can formally express intent to sell their property through the society.

- Submit property sale listing: flat number, area, asking price, contact details.
- Admin approves / rejects listing before it goes live on a community board.
- Interested buyers (other residents) can express interest through the app.
- Admin can facilitate introduction between seller and buyer.
- Status tracking: Under Review > Approved > Listed > Under Negotiation > Sold.
- Option to remove listing at any time.

### 3.2.10 Travel Mode (Maintenance Pause)

Residents travelling for extended periods can request a pause on certain variable charges.

- Submit travel request: travel start date, expected return date, reason (optional).
- Specify which services to pause (e.g., newspaper, milk, canteen meals).
- Admin reviews and approves the travel pause.
- Maintenance dues paused/reduced per society rules.
- Auto-activation on return date; resident can also manually mark return.
- Push notification reminder 1 day before scheduled return.

### 3.3 Resident App — Non-Functional Requirements

|                    |                                                                          |
|--------------------|--------------------------------------------------------------------------|
|                    |                                                                          |
| Platforms          | iOS 14+ and Android 8.0+                                                 |
| Ads                | Zero advertisements — completely ad-free experience                      |
| Performance        | App launch < 2 seconds; API responses < 1.5 seconds on 4G                |
| Offline Mode       | View past data, raise offline complaints synced when online              |
| Push Notifications | Real-time via FCM / APNs; user can configure per category                |
| Accessibility      | WCAG 2.1 AA compliant; supports system font scaling                      |
| Languages          | English and regional language support (Hindi, Kannada, Tamil, etc.)      |
| Security           | End-to-end encryption; OTP-based login; biometric auth support           |
| Privacy            | PDPA / IT Act compliant; no data sold to third parties; no ads profiling |
| Onboarding         | Resident verified by admin before app access; OTP + flat verification    |

## 4. App 2 — Staff Mobile App

The Staff App empowers community service workers with digital tools to manage their daily work, track performance, and communicate within the staff community. It is designed for ease-

of-use by users with basic digital literacy.

#### 4.1 Attendance & Shift Management

- Daily login/logout with location verification (within community geofence).
- Biometric or face-ID based check-in (if hardware is available).
- Shift schedule view: today, this week, upcoming.
- View total hours worked per day, week, and month.
- Overtime tracking with admin approval.
- Late arrival and early departure flagging with reason submission.
- Attendance summary available for download.

#### 4.2 Task & Service Request Management

- View list of service requests assigned by admin (plumbing, carpentry, cleaning, etc.).
- See request details: resident name, flat, description, photos attached by resident.
- Mark task as Accepted > In Progress > Completed.
- Upload before and after photos as proof of work.
- Add notes/comments to a task.
- Reject a task with reason (escalates to admin).
- View full history of completed tasks.
- Real-time notification when a new task is assigned.

#### 4.3 Reviews & Ratings

- View ratings and reviews received from residents for completed tasks.
- See overall performance score and trend over time.
- Flag inappropriate reviews to admin.
- Receive notification when a new review is posted.
- Admin-visible performance leaderboard (configurable).

#### 4.4 Leave & Holiday Management

- Apply for leave: casual, medical, privilege leave.
- Select leave dates and submit reason.
- Track leave status: Pending > Approved / Rejected.
- View remaining leave balance by type.
- View official society holidays calendar.
- Admin approval workflow for all leave requests.
- Notification on leave approval or rejection.

#### 4.5 Proof of Work — Photo Upload

- Upload multiple photos per task (before/after/during).
- Photos are geotagged and timestamped automatically.
- Photos are attached to the task record visible to admin.
- Compressed upload to save mobile data.

- Option to add a voice note or text note alongside photo.

#### 4.6 Staff Community Platform

A dedicated internal communication channel for staff members.

- Team announcements from admin/supervisor.
- Staff notice board: policy updates, safety alerts, schedule changes.
- Staff-to-staff messaging (within approved groups).
- Training materials and how-to guides uploaded by admin.
- Recognition / shoutout board: admin can highlight good performers.
- Staff welfare notices (health camps, benefits, etc.).

#### 4.7 Staff Profile & Documents

- View personal profile: name, ID, designation, team.
- Upload and view employment documents.
- View salary slips and payment history.
- Emergency contact information management.

#### 4.8 Staff App — Non-Functional Requirements

|                |                                                                           |
|----------------|---------------------------------------------------------------------------|
|                |                                                                           |
| Platform       | Android 8.0+; lightweight APK < 30MB for low-end devices                  |
| Language       | Simple interface with regional language support (Hindi + local languages) |
| Connectivity   | Offline mode for task viewing; syncs on reconnection                      |
| Data Usage     | Low data mode for photo compression; works on 2G/3G                       |
| Authentication | PIN-based login; biometric if device supports it                          |
| Security       | Staff data isolated per community; RBAC enforced                          |
| Accessibility  | Large tap targets; high contrast; voice-over support                      |

### 5. App 3 — Admin Portal (Web + Mobile)

The Admin Portal is the operational brain of SocietyOS. It provides real-time visibility, control, and reporting across all resident and staff activities.

#### 5.1 Dashboard & Analytics

- Unified dashboard: total residents, active complaints, pending service requests, upcoming events, today's attendance.
- Financial snapshot: total dues collected, outstanding maintenance, recent transactions.
- Activity feed: latest events across all modules in real time.
- Quick action shortcuts: post notice, create event, approve request, send alert.

- Charts and trend graphs: complaint resolution times, service ratings, canteen usage, payment compliance.

## 5.2 Resident Management

- Onboard residents: link residents to flat numbers, verify identity.
- Manage tenant vs. owner profiles.
- View resident activity, payment history, and complaint history.
- Deactivate accounts (for vacated or sold flats).
- Bulk communication: send messages to selected residents or all.
- Export resident directory.

## 5.3 Staff Management

- Add, edit, deactivate staff profiles.
- Assign staff to service categories (plumber, security, etc.).
- View real-time attendance logs.
- Approve / reject leave requests.
- Assign tasks to specific staff members.
- View and download staff performance reports.
- Manage salary structures and payment records.
- Upload and manage staff documents.

## 5.4 Service Request Management

- View all incoming service requests with priority queue.
- Assign requests to available staff with one click.
- Track all requests by status (Open, Assigned, In Progress, Completed, Disputed).
- Set SLAs (Service Level Agreements) per service category.
- Receive alerts for SLA breaches.
- View request photos and completion proofs.
- Dispute resolution: step in when resident and staff disagree on completion.
- Export service request reports by date range, category, staff member.

## 5.5 Canteen Management

- Create and update daily/weekly menus.
- Add dish details: name, description, price, calories, allergens.
- Manage canteen staff access to the menu editor.
- View meal ratings and resident feedback.
- Analyse most and least popular dishes.
- Manage meal pre-order slots and capacity.

## 5.6 Event Management

- Create, edit, and cancel community events.
- Set registration limits and manage waitlists.
- View attendee list with flat numbers.

- Send event-specific notifications to registrants.
- Post-event: view feedback and ratings.
- Export event reports.

#### 5.7 Medical Module Administration

- Manage list of on-site medical staff and visiting doctors.
- Set appointment slots and availability schedules.
- View SOS alerts log and response times.
- Configure SOS alert recipients.
- View appointment booking records.

#### 5.8 Complaints Administration

- View all complaints by status, category, and priority.
- Assign complaints to responsible staff or committee member.
- Update status and add resolution notes.
- Set escalation rules and SLAs per category.
- View complaint trends and recurring issues.
- Generate complaint resolution reports.

#### 5.9 Financial Management

- Configure maintenance charge structures (monthly, quarterly, annual).
- Set up itemised billing: base maintenance, parking, water, penalty, etc.
- View all payments: received, pending, overdue.
- Send payment reminders to defaulters.
- Generate financial reports: collection summary, outstanding dues, ledger.
- Integrate with accounting software (export to Tally / Excel).
- Approve or process refunds.

#### 5.10 Property & Travel Management

- View and approve property sale listings.
- Facilitate buyer-seller introductions.
- Review and approve travel pause requests.
- Track active travel pauses and scheduled return dates.
- Adjust billing for residents on travel pause per configured rules.

#### 5.11 Notices, Polls & Communication

- Post official society notices to all or selected residents.
- Create polls and view real-time results.
- Send targeted push notifications.
- Schedule notifications for future delivery.
- Maintain communication archive.

#### 5.12 Admin Portal — Non-Functional Requirements

|  |  |
|--|--|
|  |  |

|                     |                                                                            |
|---------------------|----------------------------------------------------------------------------|
| Web Browser Support | Chrome 90+, Firefox 90+, Safari 14+, Edge 90+                              |
| Mobile App          | iOS 14+ and Android 8.0+; responsive layout                                |
| Performance         | Dashboard loads < 3 seconds; reports < 5 seconds for 1 year data           |
| Role-Based Access   | Super Admin, Manager, Finance Admin, Canteen Admin, Medical Admin          |
| Audit Trail         | All admin actions logged with timestamp, user ID, and changed values       |
| Data Export         | All reports exportable as CSV, Excel, and PDF                              |
| Security            | 2FA mandatory for admin accounts; session timeout after 30 mins idle       |
| Uptime SLA          | 99.5% uptime; maintenance windows notified 24 hours in advance             |
| Backup              | Daily automated backups; 90-day retention; disaster recovery RTO < 4 hours |

## 6. Key User Stories

### 6.1 Resident User Stories

|       |          |                                               |                                                              |
|-------|----------|-----------------------------------------------|--------------------------------------------------------------|
|       |          |                                               |                                                              |
| RS-01 | Resident | Pre-approve a visitor and share a QR code     | They can enter without me needing to answer a call           |
| RS-02 | Resident | Request a plumber with a preferred time slot  | I can get my leaking tap fixed without calling admin         |
| RS-03 | Resident | Rate the plumber after the job is done        | Others can choose service providers based on reviews         |
| RS-04 | Resident | View today's canteen menu                     | I can decide whether to eat at home or the canteen           |
| RS-05 | Resident | Register for the community yoga session       | I can confirm my spot and get a reminder                     |
| RS-06 | Resident | Press SOS for a medical emergency             | Help is alerted immediately without me searching for numbers |
| RS-07 | Resident | Book an appointment with the society doctor   | I can get a check-up without going to a hospital             |
| RS-08 | Resident | Raise a complaint about a broken lift         | It gets tracked and resolved systematically                  |
| RS-09 | Resident | Pay maintenance online and download a receipt | I don't need to hand over cash or visit the office           |
| RS-10 | Resident | Submit a travel pause request for 3 weeks     | Variable charges are paused while I am away                  |
| RS-11 | Resident | List my apartment for sale                    | Interested buyers within the community are notified          |

## 6.2 Staff User Stories

|       |                |                                                  |                                                                   |
|-------|----------------|--------------------------------------------------|-------------------------------------------------------------------|
|       |                |                                                  |                                                                   |
| SS-01 | Security Guard | Log my attendance via the app when I arrive      | My hours are tracked without manual registers                     |
| SS-02 | Plumber        | See my assigned service requests for today       | I know which flats to visit and in what order                     |
| SS-03 | Plumber        | Upload before/after photos of a completed repair | There is proof of work and residents cannot dispute without basis |
| SS-04 | Housekeeper    | Apply for 2 days of casual leave                 | My leave is processed without visiting the office                 |
| SS-05 | Any Staff      | View my performance ratings from residents       | I understand where I can improve my service quality               |
| SS-06 | Any Staff      | Read the notice board for today's updates        | I don't miss important announcements from management              |

## 6.3 Admin User Stories

|       |               |                                                           |                                                            |
|-------|---------------|-----------------------------------------------------------|------------------------------------------------------------|
|       |               |                                                           |                                                            |
| AS-01 | Admin         | See all overdue maintenance payments in one view          | I can send targeted reminders and manage cash flow         |
| AS-02 | Admin         | Assign an incoming plumbing request to a specific plumber | Work is distributed fairly and tracked centrally           |
| AS-03 | Admin         | View a dashboard of today's complaints by category        | I can prioritise the most impactful issues first           |
| AS-04 | Admin         | Approve a resident's travel pause request                 | Their billing is adjusted correctly during their absence   |
| AS-05 | Admin         | Create a community event and cap registration at 50       | We manage venue capacity and send reminders to registrants |
| AS-06 | Admin         | Update the canteen menu for the upcoming week             | Residents see accurate menus in advance                    |
| AS-07 | Admin         | View a staff member's attendance for the month            | I can process payroll accurately                           |
| AS-08 | Finance Admin | Generate a monthly dues collection report as PDF          | It can be shared at the monthly committee meeting          |

## 7. Recommended Technology Stack

### 7.1 Mobile Applications (Resident & Staff Apps)

|           |                        |                                                    |
|-----------|------------------------|----------------------------------------------------|
|           |                        |                                                    |
| Framework | React Native / Flutter | Single codebase for iOS & Android; large community |

|                    |                                       |                                               |
|--------------------|---------------------------------------|-----------------------------------------------|
| State Management   | Redux Toolkit / Riverpod              | Scalable and testable state management        |
| Real-time          | Firebase Realtime DB / Socket.io      | Live task status, SOS alerts, notifications   |
| Push Notifications | Firebase Cloud Messaging (FCM) + APNs | Reliable cross-platform notifications         |
| Payments           | Razorpay SDK                          | Supports UPI, Cards, Net Banking; India-first |
| Maps / Location    | Google Maps SDK + Geofencing API      | Attendance geofencing, SOS location           |
| Media Upload       | AWS S3 / Cloudflare R2                | Scalable, cheap storage for proof photos      |
| Auth               | Firebase Auth / Custom JWT + OTP      | Secure, phone number-based OTP login          |

## 7.2 Admin Web Portal

|                  |                          |                                      |
|------------------|--------------------------|--------------------------------------|
|                  |                          |                                      |
| Frontend         | React.js + Next.js       | SSR for performance; large ecosystem |
| UI Components    | shadcn/ui + Tailwind CSS | Clean, accessible, customisable      |
| Charts           | Recharts / Nivo          | Flexible dashboards and analytics    |
| State Management | Zustand / React Query    | Lightweight + server state sync      |
| Auth             | NextAuth.js + 2FA        | Secure admin authentication with MFA |

## 7.3 Backend & Infrastructure

|                    |                                |                                               |
|--------------------|--------------------------------|-----------------------------------------------|
|                    |                                |                                               |
| API                | Node.js (NestJS) / Go          | Scalable REST + WebSocket APIs                |
| Database (Primary) | PostgreSQL                     | Relational data; ACID compliance for payments |
| Database (Cache)   | Redis                          | Session management; real-time queues          |
| File Storage       | AWS S3 / Cloudflare R2         | Proof photos, documents, receipts             |
| Background Jobs    | Bull Queue (Redis)             | Notifications, reminders, report generation   |
| Hosting            | AWS / GCP (Kubernetes)         | Auto-scaling; multi-tenant architecture       |
| CDN                | CloudFront / Cloudflare        | Fast asset delivery across India              |
| Monitoring         | Datadog / Grafana + Prometheus | Uptime, error rates, performance              |
| CI/CD              | GitHub Actions                 | Automated testing and deployment pipelines    |

## 8. Integration Requirements

|                    |                                    |                          |
|--------------------|------------------------------------|--------------------------|
|                    |                                    |                          |
| Payment Gateway    | Maintenance dues, service payments | Razorpay / PayU          |
| SMS Gateway        | OTP, alerts, payment receipts      | Twilio / MSG91           |
| Email Service      | Receipts, reports, onboarding      | SendGrid / AWS SES       |
| Push Notifications | Real-time app alerts               | Firebase Cloud Messaging |

|                    |                                    |                                     |
|--------------------|------------------------------------|-------------------------------------|
| Maps & Geofencing  | Staff attendance, SOS location     | Google Maps Platform                |
| Video Calling      | Medical teleconsultation (Phase 2) | Twilio Video / Agora                |
| Accounting Export  | Financial reports to Tally         | CSV / Tally XML export              |
| Biometric Hardware | Staff check-in integration         | ZKTeco / eSSL API (optional)        |
| CCTV / DVR         | Live feed for residents            | ONVIF-compatible DVR APIs (Phase 2) |

## 9. Security & Compliance Requirements

### 9.1 Authentication & Authorisation

- All users authenticated via OTP (phone number) as primary method.
- Biometric fallback (fingerprint / face ID) on supported devices.
- Admin accounts require 2FA (OTP + TOTP authenticator app).
- Role-Based Access Control (RBAC) enforced across all modules.
- Session management: auto-expiry after configurable idle period.

### 9.2 Data Security

- All data encrypted in transit (TLS 1.3) and at rest (AES-256).
- PII data (resident details, medical records) stored with additional encryption.
- API endpoints protected with rate limiting and DDoS protection.
- SQL injection, XSS, CSRF protection on all input points.
- Penetration testing conducted before go-live and annually.

### 9.3 Privacy & Compliance

- Compliance with India's Digital Personal Data Protection (DPDP) Act 2023.
- Explicit consent collected during onboarding for data processing.
- Data minimisation: only collect data necessary for each feature.
- Right to data deletion: residents can request account deletion.
- No resident data sold, rented, or used for ad targeting.
- Data retention policy: active data retained as long as resident is active; anonymised after 3 years of inactivity.

### 9.4 Multi-Tenancy

- Each society is an isolated tenant; no data leakage between societies.
- Society-level database partitioning or separate schemas.
- Admin from Society A cannot access Society B data under any circumstance.

## 10. Implementation Roadmap

|               |            |                                                                                                           |
|---------------|------------|-----------------------------------------------------------------------------------------------------------|
|               |            |                                                                                                           |
| Phase 1 — MVP | Months 1-3 | Visitor Management, Maintenance Payments, Complaints, Utility Services, Staff Attendance, Admin Dashboard |

|                    |              |                                                                                                                          |
|--------------------|--------------|--------------------------------------------------------------------------------------------------------------------------|
| Phase 2 — Core+    | Months 4-6   | Canteen Menu & Ratings, Event Management, Medical SOS & Appointments, Staff Task App (full), Property Sale, Travel Pause |
| Phase 3 — Advanced | Months 7-9   | Advanced Analytics, Biometric Integration, Video Consultation, CCTV Access, Community Forum, Accounting Export           |
| Phase 4 — Scale    | Months 10-12 | Multi-society support, White-label version, Marketplace for external vendors, API access for third parties               |

## 10.1 Go-Live Checklist

- Complete development of Phase 1 modules.
- Internal QA testing across all three apps.
- Pilot deployment in 1-2 test societies.
- Resident and staff onboarding sessions.
- Security audit and penetration test.
- App store submissions (iOS & Android).
- Hypercare support for first 30 days post-launch.

## 11. Assumptions & Constraints

### 11.1 Assumptions

- Each society will have a dedicated admin who manages the platform.
- Society residents own smartphones (Android or iOS).
- Internet connectivity is available within the society premises (Wi-Fi).
- Payment gateway (Razorpay) operates within existing regulatory framework.
- Society has an existing bank account for maintenance payments to flow into.
- Medical help desk is a pre-existing facility within the community (the app connects to it, does not create it).

### 11.2 Constraints

- The platform must work on mid-range Android devices (2GB RAM and above).
- App size must not exceed 50MB for Resident App; 30MB for Staff App.
- No dependency on hardware not already available in the community (geofencing uses GPS, not RFID).
- Biometric hardware integration is optional and depends on what the society installs.
- Regulatory compliance with DPDP Act must be met before launch.

### 11.3 Out of Scope

- Property rental listing and management (future phase).
- Grocery delivery or food ordering (external service; not a canteen feature).

- HR payroll processing (payslip view is in scope; payroll calculation is out of scope).
- Construction or renovation project management.
- Integration with municipal water / electricity utilities.

## 12. Success Metrics & KPIs

|                                   |                                                          |
|-----------------------------------|----------------------------------------------------------|
| Resident App adoption rate        | > 80% of registered households active in first month     |
| Staff App adoption rate           | > 90% of staff logging attendance via app                |
| Maintenance payment online rate   | > 70% of dues paid digitally (vs. cash)                  |
| Average complaint resolution time | < 48 hours for standard complaints                       |
| Service request completion rate   | > 90% of requests completed within SLA                   |
| App store rating                  | > 4.3 stars on Play Store and App Store                  |
| SOS response time                 | < 5 minutes average from button press to acknowledgement |
| Admin dashboard usage             | Daily active use by admin for > 20 minutes/day           |
| Canteen menu view rate            | > 60% of residents view menu at least twice per week     |
| NPS Score                         | > 40 (Good) at 3-month survey                            |

## 13. Glossary

|                 |                                                                                    |
|-----------------|------------------------------------------------------------------------------------|
| Society         | A registered residential complex or gated community with a managing committee      |
| Resident        | A person (owner or tenant) living in a flat within the society                     |
| MC / Admin      | Management Committee: elected body responsible for running the society             |
| Service Request | A resident's request for a skilled service (plumbing, carpentry, etc.)             |
| SOS             | Save Our Souls — emergency alert button for immediate help                         |
| Travel Pause    | A resident's formal request to pause certain billing while away on extended travel |
| RBAC            | Role-Based Access Control: permissions assigned by job role                        |
| SLA             | Service Level Agreement: committed response/ resolution time                       |
| OTP             | One-Time Password: secure login verification code sent via SMS                     |
| FCM             | Firestore Cloud Messaging: Google's push notification service                      |
| DPDP Act        | Digital Personal Data Protection Act 2023 (India)                                  |
| Geofencing      | Virtual boundary around the society premises used for location-based checks        |
